

COMPREHENSIVE WEBSITE AUDIT

Website Performance & SEO Analysis

<https://www.krishchhatrala.live/>

81

Global Score
Grade B

Audit Completed: June 23, 2026

Generated for: <https://www.krishchhatrala.live/>

Executive Summary

This report provides a comprehensive technical analysis of <https://www.krishchhatrala.live/>. Based on our findings, your global score is 81/100. The following breakdown highlights specific areas of strength and opportunity.

CATEGORY BREAKDOWN

Performance 77	Resource Opt 90	SEO 88
Mobile 47	Social Tags 95	Technical SEO 100
Security 86	Images 73	Analytics 89
Legal 3	Contact 53	Content 90
Freshness 100	Domain 84	Links 95

CRITICAL PRIORITIES (12)

LEGAL

No privacy policy page found on the website

Fix: Create and link a privacy policy page explaining data collection and usage

LEGAL

No cookie consent mechanism detected

Fix: Add a cookie consent banner that lets users accept or reject non-essential cookies

LEGAL

No GDPR compliance measures found

Fix: Implement data subject rights, consent flows, and a data processing disclosure

SEO

No H1 tag found on page — primary ranking signal is completely missing

Fix: Add one H1 such as 'Video Editor & AI Marketing Expert — Krish Chhatrala' above the fold

MOBILE

Popup covering 200% of screen blocks content on mobile

Fix: Replace full-screen popup with a small bottom banner or inline prompt under 30% screen height

MOBILE

Hero section spans 150% of viewport, burying content below fold

Fix: Cap hero height at 80-90vh max and ensure CTA is visible without scrolling

MOBILE

No mobile menu found — desktop nav unusable on small screens

Fix: Implement a hamburger or bottom nav menu pattern for screens under 768px

MOBILE

5 touch targets are smaller than the 48×48px minimum

Fix: Increase buttons, links, and icons to minimum 48×48px with padding if needed

MOBILE

Adjacent interactive elements have less than 8px gap causing tap errors

Fix: Add at least 8px margin between neighboring buttons and links

MOBILE

Missing touch-action CSS causes tap delay on mobile browsers

Fix: Add touch-action: manipulation to buttons and interactive elements in CSS

MOBILE

1 text element is below 16px, risking iOS auto-zoom on tap

Fix: Set minimum font size to 16px for all body and interactive text elements

PERFORMANCE

LCP is 4.68s — 87% slower than 2.5s target, directly hurts Google rankings

Fix: Preload LCP hero image with <link rel='preload'>, use fetchpriority='high', serve next-gen WebP/AVIF format

KEY METRICS

FCP 2.3s	LCP 4.7s	CLS 0.000	TBT 28.0ms
-------------	-------------	--------------	---------------

Summary

Mobile performance (81/100) is your critical bottleneck — Google uses mobile-first indexing, meaning your 4.68s LCP is actively suppressing search rankings. Priority fixes: 1) Preload + convert LCP hero image to WebP (saves 1.8–2.2s on LCP), 2) Reduce 2.23MB page weight via image compression (saves 1.0–1.5s), 3) Inline critical CSS to fix 2.26s FCP (saves 400–600ms), 4) Defer 33KB unused JS to protect TBT. Addressing items 1–3 alone should push mobile score to 90+ and bring LCP under the 2.5s Core Web Vitals passing threshold.

INSIGHTS & RECOMMENDATIONS (6)

Largest Contentful Paint (Mobile)

CRITICAL

PROBLEM

LCP is 4.68s — 87% slower than 2.5s target, directly hurts Google rankings

IMPACT

Reduce LCP by 1.8–2.2s, pushing it under 2.5s target, mobile score +10–15 pts

RECOMMENDATION

Preload LCP hero image with <link rel='preload'>, use fetchpriority='high', serve next-gen WebP/AVIF format

WHY THIS MATTERS

LCP measures loading performance. Users perceive sites with LCP <2.5s as fast. Every 100ms improvement increases conversion by 1%.

First Contentful Paint (Mobile)

HIGH

PROBLEM

FCP is 2.26s — 25% slower than 1.8s target, users see blank screen too long

IMPACT

Reduce FCP by 400–600ms, improving perceived load speed and mobile score +5–8 pts

RECOMMENDATION

Inline critical above-fold CSS (~1–2KB), preconnect to key origins, minimize server TTFB with caching headers

WHY THIS MATTERS

FCP measures when users first see content. Faster FCP reduces bounce rate and improves perceived performance.

Mobile Performance Score

MEDIUM

PROBLEM

Mobile score 81/100 — mobile is Google's #1 ranking signal; 53% users abandon after 3s

IMPACT

Combined with image optimization, mobile score improves to 88–93, protecting SEO rankings

RECOMMENDATION

Serve responsive images with srcset/sizes, reduce image dimensions to actual display size on mobile viewports

WHY THIS MATTERS

Mobile optimization is critical - 60% of web traffic is mobile. Google uses mobile-first indexing.

Desktop Performance Score

MEDIUM

PROBLEM

Desktop score 87/100 — gap vs mobile (81) suggests unoptimized assets served to all devices

IMPACT

Desktop score +5–8 pts; mobile score +6–10 pts; reduces transfer size by ~25–30%

RECOMMENDATION

Implement adaptive serving: smaller image variants for mobile, enable Brotli compression on text assets (HTML/CSS/JS)

Largest Contentful Paint (Mobile)

MEDIUM

PROBLEM

LCP element likely not cached — repeat visitors still experience slow LCP without cache strategy

IMPACT

Reduce LCP by 0.5–1.0s for repeat visits; FCP improvement of 300–500ms globally

RECOMMENDATION

Add Cache-Control headers for static assets (max-age=31536000), use a CDN to serve assets from edge nodes closer to users

WHY THIS MATTERS

LCP measures loading performance. Users perceive sites with LCP <2.5s as fast. Every 100ms improvement increases conversion by 1%.

First Contentful Paint (Mobile)

LOW

PROBLEM

No font-display strategy detected — web fonts may block text rendering and inflate FCP

IMPACT

Reduce FCP by 200–400ms; eliminates invisible text flash, improving perceived performance

RECOMMENDATION

Add font-display: swap to all @font-face rules; preload critical font files with <link rel='preload' as='font'>

WHY THIS MATTERS

FCP measures when users first see content. Faster FCP reduces bounce rate and improves perceived performance.

KEY METRICS

PAGE WEIGHT 2.23 MB	RENDER BLOCKING 0	UNUSED JS 33 KB	UNUSED CSS 0 KB
------------------------	----------------------	--------------------	--------------------

Summary

Mobile performance (81/100) is your critical bottleneck — Google uses mobile-first indexing, meaning your 4.68s LCP is actively suppressing search rankings. Priority fixes: 1) Preload + convert LCP hero image to WebP (saves 1.8–2.2s on LCP), 2) Reduce 2.23MB page weight via image compression (saves 1.0–1.5s), 3) Inline critical CSS to fix 2.26s FCP (saves 400–600ms), 4) Defer 33KB unused JS to protect TBT. Addressing items 1–3 alone should push mobile score to 90+ and bring LCP under the 2.5s Core Web Vitals passing threshold.

INSIGHTS & RECOMMENDATIONS (2)

Total Page Weight

HIGH

PROBLEM

Page weight is 2.23MB — 123% over 1MB target, kills mobile load times on 4G

IMPACT

Reduce page weight by ~900KB–1.2MB, shave 1.0–1.5s off LCP and FCP on mobile

RECOMMENDATION

Compress images with WebP/AVIF (avg 40–60% savings), lazy-load below-fold images, audit and remove unused assets

WHY THIS MATTERS

Large pages take longer to download especially on mobile networks. Every MB adds 5-10 seconds on 3G.

Unused Javascript

MEDIUM

PROBLEM

33KB of unused JavaScript shipped to browser — wastes parse/compile time on mobile CPUs

IMPACT

Save 150–250ms on mobile TBT and FCP; prevents future TBT regression as site grows

RECOMMENDATION

Implement code splitting, tree-shake unused JS modules, defer non-critical scripts with defer/async attributes

KEY METRICS

TITLE LENGTH 52 Optimal: 50-60	META DESC 121 Optimal: 150-160	H1 COUNT 0	STRUCTURED DATA Yes
---	---	----------------------------------	---

Summary

The page has a strong technical foundation (canonical, structured data, clean URL) but is critically undermined by a missing H1 tag and only 32 words of content, leaving Google with almost no on-page signals to rank against. Keyword stuffing on 'deliver' and an incomplete meta description further erode trust and CTR potential. Fixing the H1, expanding content to 300+ words, and balancing keyword density should be the immediate three-step priority.

INSIGHTS & RECOMMENDATIONS (5)

H1 Heading

CRITICAL

PROBLEM

No H1 tag found on page — primary ranking signal is completely missing

IMPACT

H1 is a top on-page ranking factor; its absence significantly weakens keyword relevance signals

RECOMMENDATION

Add one H1 such as 'Video Editor & AI Marketing Expert — Krish Chhatrala' above the fold

WHY THIS MATTERS

H1 tag signals page topic to search engines. Missing or multiple H1s confuse crawlers about page purpose.

Page Content

HIGH

PROBLEM

Thin content detected — only 32 words indexed, far below 300-word minimum threshold

IMPACT

More content gives Google context to rank the page for broader relevant queries

RECOMMENDATION

Expand body copy to 300+ words covering services, process, results, and target clients with natural keyword use

WHY THIS MATTERS

Content quality and depth are major ranking factors. Thin content (<300 words) rarely ranks well.

Keyword Density

HIGH

PROBLEM

Keyword stuffing: 'deliver' appears at 5.13% density — exceeds the 2-3% safe threshold

IMPACT

Eliminates spam signals that can trigger ranking suppression or manual penalties

RECOMMENDATION

Reduce 'deliver' usage to 1-2 occurrences and replace with synonyms like 'produce', 'create', or 'provide'

WHY THIS MATTERS

Keywords signal content relevance to search engines. But keyword stuffing (>3% density) triggers penalties.

Meta Description

MEDIUM

PROBLEM

Meta description is 121 chars — below the 150-160 char ideal, and appears truncated mid-sentence

IMPACT

Fuller descriptions improve SERP click-through rate and communicate complete value proposition

RECOMMENDATION

Expand to 150-160 chars: end with a clear CTA like 'Book a free strategy call today.' instead of cutting off

Schema Markup

MEDIUM

PROBLEM

5 schema types declared but only 1 schema block implemented — mismatch reduces rich result eligibility

IMPACT

Proper schema unlocks FAQ rich results and local pack visibility, increasing SERP real estate

RECOMMENDATION

Implement separate schema blocks for FAQPage, Service, and LocalBusiness with complete required properties

WHY THIS MATTERS

Schema markup enables rich snippets in search results. Rich snippets get 30% higher click-through rates.

KEY METRICS

VIEWPORT Present	ZOOM ENABLED Enabled	TOUCH ISSUES 5 (2 link, 3 button)	TOUCH SPACING 1 issues
MOBILE MENU No	HORIZONTAL SCROLL No	SMALL TEXT 1 (1 critical: 0 body, 1 labels)	FIXED ELEMENTS 9%
INTRUSIVE POPUPS Yes (200% coverage)	FORM INPUT TYPES 0 issues	THUMB ZONE 0 CTAs outside	CONTENT ABOVE FOLD Hero 150%
LINE LENGTH 0 paragraphs	CTA SCROLL DEPTH N/A		

Summary

The site has critical mobile usability failures centered on an oversized interstitial popup, a missing mobile navigation menu, and a hero section consuming 150% of the viewport. Touch interaction quality is also poor with undersized targets, insufficient spacing, and missing touch-action CSS. Fixing the popup and mobile menu first will have the most immediate impact on both SEO rankings and user retention.

INSIGHTS & RECOMMENDATIONS (8)

Intrusive Interstitials		CRITICAL
PROBLEM Popup covering 200% of screen blocks content on mobile	IMPACT Prevents Google ranking penalty and stops users from immediately bouncing	
RECOMMENDATION Replace full-screen popup with a small bottom banner or inline prompt under 30% screen height		

Hero Height Percentage

CRITICAL

PROBLEM

Hero section spans 150% of viewport, burying content below fold

IMPACT

Users see meaningful content and CTAs immediately without scrolling

RECOMMENDATION

Cap hero height at 80-90vh max and ensure CTA is visible without scrolling

Mobile Menu Detected

CRITICAL

PROBLEM

No mobile menu found — desktop nav unusable on small screens

IMPACT

Makes site navigable for 60%+ of traffic currently struggling with desktop nav

RECOMMENDATION

Implement a hamburger or bottom nav menu pattern for screens under 768px

WHY THIS MATTERS

Mobile optimization is critical - 60% of web traffic is mobile. Google uses mobile-first indexing.

Small Touch Targets

CRITICAL

PROBLEM

5 touch targets are smaller than the 48×48px minimum

IMPACT

Reduces misclicks and frustration, meeting Apple and Google UX standards

RECOMMENDATION

Increase buttons, links, and icons to minimum 48×48px with padding if needed

Touch Target Spacing Issues

CRITICAL

PROBLEM

Adjacent interactive elements have less than 8px gap causing tap errors

IMPACT

Users tap the correct element first time, reducing errors and frustration

RECOMMENDATION

Add at least 8px margin between neighboring buttons and links

Touch Action CSS

CRITICAL

PROBLEM

Missing touch-action CSS causes tap delay on mobile browsers

IMPACT

Eliminates 300ms tap delay, making interactions feel instant and responsive

RECOMMENDATION

Add touch-action: manipulation to buttons and interactive elements in CSS

Small Text Elements

CRITICAL

PROBLEM

1 text element is below 16px, risking iOS auto-zoom on tap

IMPACT

Prevents unwanted iOS zoom and improves readability for all users

RECOMMENDATION

Set minimum font size to 16px for all body and interactive text elements

Persistent Fixed Elements Coverage

HIGH

PROBLEM

Persistent fixed elements cover 9% of screen space continuously

IMPACT

Reclaims usable screen real estate, especially critical on small devices

RECOMMENDATION

Slim down sticky header/footer; consider hiding header on scroll-down, showing on scroll-up

KEY METRICS

OG TITLE Present	OG IMAGE Present	OG DESCRIPTION Present	TWITTER CARD summary_large_image
--	--	--	--

Summary

Your social tags are largely solid with a strong title, description, and card type already in place. The most impactful fixes are declaring explicit image dimensions and adding og:site_name to ensure fast, sharp, branded previews across all platforms. Adding Twitter creator/site usernames will complete your attribution setup and close the remaining gaps.

INSIGHTS & RECOMMENDATIONS (5)

Og:image:width / og:image:height

HIGH

PROBLEM

Image dimensions not declared in meta tags

IMPACT

Prevents Facebook/LinkedIn from re-fetching image; faster, crisper previews

RECOMMENDATION

Add <meta property='og:image:width' content='1200'> and og:image:height content='630'

WHY THIS MATTERS

Images are typically 50-70% of page weight. Unoptimized images directly impact LCP and bandwidth costs.

Og:image (dimensions of actual file)

HIGH

PROBLEM

krish.jpeg may not meet 1200×630px recommended dimensions

IMPACT

Eliminates cropping/blurriness on Facebook, LinkedIn, Slack, iMessage previews

RECOMMENDATION

Verify and resize og:image to exactly 1200×630px, keep file under 1MB

WHY THIS MATTERS

Images are typically 50-70% of page weight. Unoptimized images directly impact LCP and bandwidth costs.

Og:site Name

MEDIUM

PROBLEM

No site name tag present; looks unbranded in pre-views

IMPACT

Displays brand name below title on Facebook/LinkedIn for professional look

RECOMMENDATION

Add <meta property='og:site_name' content='Krish Chhatrala'>

Twitter:creator

MEDIUM

PROBLEM

Twitter creator username missing; no author attribution

IMPACT

Attributes content to your profile, boosting personal brand visibility on X

RECOMMENDATION

Add <meta name='twitter:creator' content='@YourTwitterHandle'>

WHY THIS MATTERS

Twitter Card determines how your links appear in tweets. Optimized cards get 2-3x more engagement.

Twitter:site

LOW

PROBLEM

Twitter site username not set; missed engagement tracking

IMPACT

Enables social attribution and analytics tracking for shared links

RECOMMENDATION

Add `<meta name='twitter:site' content='@YourTwitterHandle'>`

WHY THIS MATTERS

Twitter Card determines how your links appear in tweets. Optimized cards get 2-3x more engagement.

KEY METRICS

ROBOTS.TXT Present	SITEMAP Present	CANONICAL Present	HREFLANG None
-----------------------	--------------------	----------------------	------------------

Summary

This site has an excellent technical SEO foundation with a clean robots.txt, valid sitemap, proper charset, no redirect chains, and an llms.txt file in place. The only actionable improvements are minor housekeeping items around sitemap freshness and optional crawl budget protection via robots.txt disallow rules. No critical or high-severity issues were detected.

INSIGHTS & RECOMMENDATIONS (2)

Sitemap Last Modified

LOW

PROBLEM

Sitemap dated 2026-06-02, updated 21 days ago

IMPACT

Ensures crawlers discover new or updated content faster

RECOMMENDATION

Set up automated sitemap regeneration on content publish/update to keep freshness optimal

WHY THIS MATTERS

Sitemap tells search engines which pages exist. Missing sitemap = slower/incomplete indexing.

Robots.txt Disallowed Paths

LOW

PROBLEM

No disallow rules defined in robots.txt

IMPACT

Prevents crawl budget waste on non-indexable or sensitive URLs

RECOMMENDATION

Review if admin, staging, or duplicate paths exist that should be blocked to preserve crawl budget

WHY THIS MATTERS

Robots.txt tells search engines which pages to crawl. Missing = search engines guess. Misconfigured = important pages blocked.

KEY METRICS

HTTPS Secure	HSTS Enabled	CSP Enabled	X-FRAME Enabled
-----------------	-----------------	----------------	--------------------

Summary

This site demonstrates a strong security posture with all critical headers (HSTS, CSP, X-Frame-Options, Permissions-Policy, Referrer-Policy, X-Content-Type-Options) properly configured and HTTPS fully enforced. No critical or high-severity vulnerabilities were detected. Remaining gaps are operational enhancements: enabling compression for performance, implementing DNSSEC for DNS integrity, and auditing external links for HTTP references.

INSIGHTS & RECOMMENDATIONS (4)

DNSSEC Enabled		MEDIUM
PROBLEM DNSSEC not configured, leaving DNS records vulnerable to spoofing/hijacking.	IMPACT Prevents DNS cache poisoning and man-in-the-middle hijacking of domain resolution.	
RECOMMENDATION Enable DNSSEC at your DNS registrar/provider; add DS records to your zone configuration.		
Compression Enabled		LOW
PROBLEM HTTP compression not enabled, increasing bandwidth usage and load times.	IMPACT Reduces bandwidth 60-80%, improves load speed and user experience.	
RECOMMENDATION Enable Gzip or Brotli compression via server config: 'Content-Encoding: br' or 'gzip'.		
WHY THIS MATTERS Compression (gzip/brotli) reduces file sizes by 70-90%. Every KB saved improves load time on slow networks.		

HTTP External Links

LOW

PROBLEM

External HTTP link audit returned no data; mixed content risk unconfirmed.

IMPACT

Eliminates mixed content warnings and maintains full HTTPS security guarantee.

RECOMMENDATION

Audit all outbound links to ensure HTTPS. Use CSP 'upgrade-insecure-requests' directive.

WHY THIS MATTERS

Internal links distribute page authority and help users navigate. Essential for SEO.

CDN Provider

LOW

PROBLEM

CDN status unconfirmed beyond Vercel detection; DDoS posture unclear.

IMPACT

Enhanced DDoS protection, global caching, and reduced origin server exposure.

RECOMMENDATION

Confirm Vercel Edge Network is active; consider Cloudflare for additional WAF and DDoS mitigation.

KEY METRICS

TOTAL 60 images	DIMENSIONS 90%	WEBP 53%	LAZY LOAD 0%
--	--------------------------------------	--------------------------------	------------------------------------

Summary

The site has excellent alt text coverage (100%) but critically lacks lazy loading across all 60 images, creating unnecessary bandwidth usage on page load. Responsive images via srcset are entirely absent, meaning all users receive the same image size regardless of device. Addressing lazy loading and srcset together would deliver the highest performance gains and significantly improve Core Web Vitals scores.

INSIGHTS & RECOMMENDATIONS (5)

Lazy Loading

HIGH

PROBLEM

0 of 60 images use lazy loading, causing unnecessary initial page load

IMPACT

Reduces initial page load time and saves bandwidth for offscreen images

RECOMMENDATION

Add loading='lazy' attribute to all below-fold images like /uploads/about-section.webp

WHY THIS MATTERS

Lazy loading defers offscreen images. Can improve LCP by 500ms+ on image-heavy pages.

Responsive Images

MEDIUM

PROBLEM

No images use srcset or picture elements for responsive delivery

IMPACT

Reduces image payload by 40-70% for mobile users by serving appropriately sized images

RECOMMENDATION

Implement srcset with multiple breakpoints (320w, 640w, 1024w) for key images like navbar.webp

WHY THIS MATTERS

Images are typically 50-70% of page weight. Unoptimized images directly impact LCP and bandwidth costs.

Images Missing Dimensions

MEDIUM

PROBLEM

6 images (10%) are missing width and height attributes causing layout shifts

IMPACT

Improves Core Web Vitals CLS score and prevents layout reflow during page load

RECOMMENDATION

Add explicit width and height attributes to all 6 images missing dimensions to prevent CLS

WHY THIS MATTERS

Images are typically 50-70% of page weight. Unoptimized images directly impact LCP and bandwidth costs.

WebP Format

LOW

PROBLEM

47% of images (28 of 60) are not yet served in WebP format

IMPACT

WebP reduces file size by 25-35% over JPEG/PNG improving load speed

RECOMMENDATION

Convert remaining non-WebP images like /uploads/krish.jpeg to WebP using a build pipeline or CDN

SVG Format

LOW

PROBLEM

No SVG images detected; icons and logos may be raster-based causing quality loss

IMPACT

SVGs are resolution-independent and typically smaller than raster equivalents

RECOMMENDATION

Replace raster icons, logos, and simple graphics with SVG for infinite scalability

KEY METRICS

GA No	GTM No	FB PIXEL No	TOTAL TOOLS 0 detected
----------	-----------	----------------	---------------------------

Summary

The site has no analytics or tag management tooling currently detected, making it impossible to measure traffic, user behavior, or conversions. GA4 and GTM are the immediate priorities as free, industry-standard foundations. Optional tools like heatmaps and ad pixels should follow once core tracking is established.

INSIGHTS & RECOMMENDATIONS (4)

Google Analytics		MEDIUM
PROBLEM GA4 not detected — visitor and conversion data unavailable	IMPACT Enables data-driven decisions on content, UX, and marketing performance.	
RECOMMENDATION Install GA4 to track traffic, user behavior, and conversions at no cost.		
WHY THIS MATTERS Analytics tracking is essential for measuring performance and user behavior. What you don't measure, you can't improve.		
Google Tag Manager		MEDIUM
PROBLEM GTM not detected — tag management requires developer changes	IMPACT Speeds up analytics implementation and reduces developer dependency.	
RECOMMENDATION Add GTM to simplify future tag deployments without code changes.		

Heatmap Tool

LOW

PROBLEM

No heatmap or session recording tool present

IMPACT

Reveals UX friction points and improves conversion without ad spend.

RECOMMENDATION

Consider Microsoft Clarity (free) to visualize clicks and user sessions.

Retargeting Pixels

INFO

PROBLEM

No ad pixels detected

IMPACT

Enables conversion tracking and retargeting to improve paid ad ROI.

RECOMMENDATION

If running paid ads, add the relevant platform pixel (Meta, Google, LinkedIn).

KEY METRICS

PRIVACY No	TERMS No	COOKIES No	A11Y No
---------------	-------------	---------------	------------

Summary

The website currently has a compliance score of 3/100, indicating critical legal gaps across privacy, cookies, and terms. All foundational legal documents are missing, exposing the site owner to significant legal risk. Immediate action should be taken to add a Privacy Policy, Cookie Consent Banner, and Terms of Service.

INSIGHTS & RECOMMENDATIONS (5)

Privacy Policy

CRITICAL

PROBLEM

No privacy policy page found on the website

IMPACT

Required by law in most countries; builds user trust and legal protection

RECOMMENDATION

Create and link a privacy policy page explaining data collection and usage

WHY THIS MATTERS

Privacy policy is legally required in most jurisdictions. GDPR/CCPA compliance mandatory.

Cookie Consent Banner

CRITICAL

PROBLEM

No cookie consent mechanism detected

IMPACT

Required under GDPR and similar laws for any site with EU visitors

RECOMMENDATION

Add a cookie consent banner that lets users accept or reject non-essential cookies

WHY THIS MATTERS

Cookie consent is legally required in EU/UK. GDPR violations = massive fines.

GDPR Compliance

CRITICAL

PROBLEM

No GDPR compliance measures found

IMPACT

Legally required if site collects data from users in the European Union

RECOMMENDATION

Implement data subject rights, consent flows, and a data processing disclosure

Terms of Service

HIGH

PROBLEM

No terms of service page exists

IMPACT

Protects site owner from misuse and sets clear expectations for users

RECOMMENDATION

Draft and publish terms of service covering usage rules, liability, and disputes

Accessibility Statement

MEDIUM

PROBLEM

No accessibility statement found

IMPACT

Recommended for inclusivity and may be legally required in some regions

RECOMMENDATION

Add an accessibility statement describing compliance efforts and contact for issues

WHY THIS MATTERS

Accessibility affects 15% of users and is a Google ranking factor. Poor a11y = lawsuits + lost customers.

KEY METRICS

GRADE A analysis	SPELLING 0	LONG SENT. 1	ALL CAPS 9
---	----------------------------------	------------------------------------	----------------------------------

Summary

The content is in excellent shape with an A grade and zero spelling errors. Only minor stylistic enhancements are needed, primarily replacing ALL CAPS usage with more professional formatting alternatives. Addressing these low-severity items will elevate the copy from good to polished.

INSIGHTS & RECOMMENDATIONS (2)

All Caps Words

LOW

PROBLEM

9 ALL CAPS words detected (e.g., EMAIL, CALL, TO-DAY, SOCIAL, TIME)

IMPACT

Improves professionalism and readability while maintaining intended emphasis

RECOMMENDATION

Replace ALL CAPS with Title Case or bold formatting for emphasis instead of shouting

Long Sentences

LOW

PROBLEM

1 long sentence detected that may reduce readability

IMPACT

Enhances reader comprehension and improves content flow

RECOMMENDATION

Break the long sentence into 2 shorter sentences under 25 words each for easier scanning

KEY METRICS

DAYS SINCE N/A	COPYRIGHT 2026	BLOG Yes
--------------------------------------	--------------------------------------	--------------------------------

INSIGHTS & RECOMMENDATIONS (1)

Blog Maintenance

LOW

PROBLEM

Blog section detected but update frequency is unknown

IMPACT

Improves SEO rankings and demonstrates site authority to visitors

RECOMMENDATION

Establish a consistent publishing schedule (e.g., 2-4 posts/month) to signal active site maintenance.

WHY THIS MATTERS

Blog content signals active site and provides keyword opportunities. Essential for content marketing.

KEY METRICS

AGE N/A yrs	SSL EXPIRY 260 days	DNSSEC No
----------------	------------------------	--------------

Summary

This domain is newly registered and falls within the high-risk window where fraudulent activity is most common. The primary concern is the domain's young age, which warrants immediate email authentication setup and active monitoring. Enabling DNSSEC is a straightforward secondary improvement available directly through the Name.com dashboard.

INSIGHTS & RECOMMENDATIONS (2)

Domain Age		HIGH
PROBLEM	IMPACT	
Domain registered in 2026, less than 1 year old	Reduces abuse risk and builds sender reputation during high-risk early period	
RECOMMENDATION		
Monitor closely for phishing/fraud signals; implement SPF, DKIM, DMARC email authentication now		
DNSSEC		LOW
PROBLEM	IMPACT	
DNSSEC not enabled, leaving DNS vulnerable to spoofing	Prevents DNS cache poisoning and protects users from being redirected to malicious sites	
RECOMMENDATION		
Enable DNSSEC through Name.com control panel under DNS settings for this domain		

KEY METRICS

TOTAL 19 5 int / 7 ext	BROKEN 0	INSECURE 0	NO REL 0
------------------------------	-------------	---------------	-------------

INSIGHTS & RECOMMENDATIONS (4)

Total Links		MEDIUM
PROBLEM	IMPACT	
Only 19 total links, well below the optimal 50-150 range	Improves crawlability, PageRank distribution, and user navigation depth	
RECOMMENDATION		
Add contextual internal links, related content links, and navigation links to reach 50+ total links		
WHY THIS MATTERS		
Internal links distribute page authority and help users navigate. Essential for SEO.		
Internal Links		MEDIUM
PROBLEM	IMPACT	
Only 5 internal links limits site crawlability and PageRank flow	Strengthens site architecture, distributes authority, and boosts SEO for linked pages	
RECOMMENDATION		
Add 10-20 additional internal links to related pages, categories, and key landing pages		
WHY THIS MATTERS		
Internal links distribute page authority and help users navigate. Essential for SEO.		

Empty Links

LOW

PROBLEM

1 empty or placeholder link detected

IMPACT

Eliminates dead navigation, improves UX, and prevents crawler confusion

RECOMMENDATION

Locate and replace the empty href link with a valid URL or remove the anchor element entirely

WHY THIS MATTERS

Internal links distribute page authority and help users navigate. Essential for SEO.

External:Internal Ratio

LOW

PROBLEM

External to internal ratio of 7:5 risks slight PageRank dilution

IMPACT

Retains more PageRank on-site and signals strong internal content ecosystem

RECOMMENDATION

Balance by adding more internal links so internal count meets or exceeds external link count

KEY METRICS

EMAIL Yes	PHONE No	FORM No	CHAT No
--------------	-------------	------------	------------

Summary

The site currently has only 2 contact methods available — a physical address and an email address — which is insufficient for a trustworthy user experience. Critical gaps include the absence of a contact form and phone number, both high-importance elements that users commonly expect. Adding a contact form, phone number, business hours, live chat, and schema markup would significantly improve accessibility and push the score well above the current 53/100.

INSIGHTS & RECOMMENDATIONS (6)

Total Contact Methods

HIGH

PROBLEM

Only 2 contact methods available, limiting user options for reaching support

IMPACT

Users can choose their preferred communication channel, reducing frustration and abandonment

RECOMMENDATION

Add at least 2-3 more contact channels such as phone number, contact form, and live chat to reach a healthy minimum of 4+ methods

WHY THIS MATTERS

Contact form enables inquiries without exposing email to spammers. Preferred by users who don't use email.

Contact Form Present

HIGH

PROBLEM

No contact form exists, forcing users to rely solely on email or physical address

IMPACT

Lowers barrier to contact, captures structured inquiries, and works for users who prefer not to use their email client

RECOMMENDATION

Implement a simple contact form with fields for name, email, subject, and message on a dedicated contact page

WHY THIS MATTERS

Contact form enables inquiries without exposing email to spammers. Preferred by users who don't use email.

Phone Number Found

MEDIUM

PROBLEM

No phone number displayed, excluding users who prefer or require voice communication

IMPACT

Builds trust, supports urgent inquiries, and accommodates users who are less comfortable with digital communication

RECOMMENDATION

Add a visible phone number in the header, footer, and contact page with clear formatting

WHY THIS MATTERS

Phone number provides immediate contact option. Builds trust especially for local businesses.

Business Hours Displayed

LOW

PROBLEM

No business hours shown, leaving users uncertain about when to expect responses

IMPACT

Sets clear expectations, reduces repeated contact attempts, and improves user trust

RECOMMENDATION

Display business hours near contact information on the contact page and footer

Live Chat Widget

LOW

PROBLEM

No live chat available, missing an opportunity for real-time support

IMPACT

Enables instant assistance, increases conversion, and satisfies users needing immediate answers

RECOMMENDATION

Integrate a lightweight chat widget such as Tidio or Intercom, even if only used during business hours

Contact Schema Markup

LOW

PROBLEM

No structured schema markup for contact information, reducing search engine visibility

IMPACT

Improves search result appearance, enables rich snippets, and helps users find contact info directly from search

RECOMMENDATION

Add LocalBusiness or ContactPage schema markup with available contact details using JSON-LD format

WHY THIS MATTERS

Schema markup enables rich snippets in search results. Rich snippets get 30% higher click-through rates.
